

# JEB INCUBATOR API

< THE BASIC YOU NEED FOR THE PROJECT />

# JEB INCUBATOR API

## Introduction

Your application **MUST** contain a front-end and a back-end using the provided API. It implements the basis of what is need for the project.

The API allows you to list startups, news, events, etc.

## Usage

You can find the full API specifications at this URL: <https://api.jeb-incubator.com/docs>.

## Authentication

---

To access the API, you need to authenticate your group for the project. You must include your "group token" in the `X-Group-Authorization` header on **every HTTP request** you make to the API.

```
X-Group-Authorization: XXXX-XXXX-XXXX-XXXX
```

Once authenticated, you can access all the API endpoints to retrieve the data you need for your application.

The users should be able to log in to the application using their email and password. As we will not send you the password of the employees, you will have to ask them to create a new account. There is an endpoint to list existing users or find a user by email.

Your group leader will receive your group token and the login details of some test employees.
